

PRIVATE AI, OWNED OUTRIGHT.

A self-hosted AI development environment your business controls — no cloud keys, no telemetry, no per-seat fees.

Tabby Tavern Stack | Jeremy Panasuk | jpanasuk@gmail.com | 715.970.0204

YOU DON'T NEED ANOTHER SUBSCRIPTION. YOU NEED YOUR OWN AI.

■ THE PROBLEM

Every month your team pays for code assistants, chat subscriptions, and API credits — and every prompt, snippet, and internal pattern leaves your building. You're renting infrastructure you could own. Meanwhile your competitors are training AI on your data, your compliance team is nervous, and your per-seat costs keep climbing as AI becomes core to every role.

■ THE SOLUTION — THE TABBY TAVERN STACK

A complete, containerized AI development environment installed on hardware **you** control. One deployment brings up AI code completion, private chat, local LLM inference, web search, and tool integration — all inside your network. Published, documented, and battle-tested on Hugging Face: huggingface.co/jpanasuk/tabby-tavern-stack.

- **Code Completion & AI Pair-Programming** — Tabby-powered Copilot alternative that lives on your network. VS Code, JetBrains, Vim ready.
- **Private Chat & Knowledge Work** — Open WebUI and SillyTavern front-ends for drafting, research, summarization — with no third-party logging.
- **Hardware-Optimized Inference** — EXL3-quantized models running on consumer GPUs (RTX-class), tuned for 40+ tokens/second response.
- **Web Search & Tooling** — SearXNG private search engine plus Model Context Protocol integration for tool-use actions (files, commands, APIs).
- **Docker-First & Reboot-Proof** — docker-compose orchestration with health checks, persistent volumes, and automatic startup. Survives outages.

■ WHAT THIS MEANS FOR YOUR BUSINESS

- **Kill per-seat AI fees:** one install replaces \$30–\$60/user/month subscriptions. Breakeven on a 20-person team: under 4 months.
- **Data stays home:** no vendor training on your code. Attorney-client privileged documents, patient notes, proprietary IP — never leave the building.
- **Latency that feels local:** sub-100ms completions beats any cloud round-trip. Your developers stay in flow.
- **Zero vendor lock-in:** model weights, configs, and full documentation are yours. You own it forever, or we maintain it for you.

■ WHO DELIVERS IT

Built by Jeremy Panasuk — 22+ years of enterprise data & infrastructure delivered to JPMorgan Chase, PepsiCo, Federal Reserve, Navy Federal, BNY Mellon, Micron, Toyota, and Harvard. \$2M+ program management. 19/20 crisis accounts rescued. This isn't a weekend project: it's the same rigor applied to Fortune 100 engagements, packaged for your business.

"You sent one of the best that Informatica has to offer in Jeremy." — MF Global Infrastructure

OFFERS & ENGAGEMENTS

Three ways to get your private AI stack live. All include 30 days of email support post-deployment.

SINGLE-GPU INSTALL

\$12,500

one-time

Small teams (up to ~15 users), one office, one GPU system.

- Tabby-Tavern stack deployed on your hardware
- Code completion, private chat, AI search
- Hardware spec + procurement guidance
- Security hardening & network isolation
- Half-day team onboarding session

PRODUCTION DEPLOYMENT

\$25,000

one-time

Mid-size orgs (15–100 users), high-availability, monitored.

- Everything in Single-GPU Install
- Redundant inference nodes + failover
- User auth, role-based access, audit logs
- Monitoring, alerts, automated backups
- Full-day training + doc library for your team

MANAGED PRIVATE AI

\$3,500/mo

one-time

Ongoing care: we run your stack so yours never thinks about it.

- Everything in Production Deployment
- 24x7 monitoring & incident response
- Model upgrades, retunes & new quantization packs
- Quarterly health checks & performance reports
- Priority phone + Slack/Teams response, 4hr SLA

THE BOTTOM LINE. A 20-person shop paying \$50/user/mo for AI subscriptions spends \$12,000/year — forever. A single installed private stack pays for itself in the first year, then it's just yours. If your data can't leave the building, or your bill can't keep growing, this is the out.
